### Summary

New York State shoreline boundary

### Description

A vector polygon GIS file that includes 1) the New York State boundary over land areas and 2) the state shoreline, including islands, in areas where the state boundary extends over major hydrographic features. The purpose is to provide an "outline" of the state for GIS and cartographic uses. It can be used to clip the boundaries in the CityTown and County feature classes in the Civil Boundaries geodatabase back to the shoreline if it is desired to only use or depict the land areas covered by those jurisdictions around the perimeter of the state. The boundaries were revised to 1:24,000-scale accuracy. Ongoing work will adjust the shorelines to 1:24,000-scale accuracy.
