This document is an abridged version of the full metadata which can be viewed using ArcGIS.

Summary

New York State boundary.

Description

Published: August 2022

A vector polygon GIS file of the New York State boundary. The file was originally a compilation of U.S. Geological Survey 1:100,000-scale digital vector files and NYS Department of Transportation 1:24,000-scale and 1:75,000-scale digital vector files. The boundary was revised to 1:24,000-scale positional accuracy.

FIELD DESCRIPTION

Geographic Names Information System (GNIS) identification number. "The GNIS is the official vehicle for geographic names use by the Federal Government and the source for applying geographic names to Federal maps & other printed and electronic products. The system supports the U.S. Board on Geographic Names, a Federal body created in 1890 and established in its present form by Public Law in 1947." FIELD DESCRIPTION

Federal Information Processing Series code. American National Standards Institute codes are standardized numeric or alphabetic codes issued by the American National Standards Institute (ANSI) to ensure uniform identification of geographic entities through all federal government agencies. ANSI has taken over the management of geographic codes from the National Institute of Standards and Technology (NIST). Under NIST, the codes adhered to the Federal Information Processing Standards (FIPS). ANSI continues to issue the commonly used FIPS codes, although the acronym has now changed to Federal Information Processing Series, because it is no longer considered the standard.
